When are the best times to work in the garden?

3. The bell rang and the children ran inside.
Where is this happening?

4. DILLON

Dillon stood with his head down. His father had come out of the house and was standing in front of him holding the ball. He was pointing at the pieces of glass on the ground. "You are going to have to pay for it this time," he said.

- a. What had Dillon done ?
- b. Had he done it before? How do you know that?

5. IF

If you lifted the roof off, you could see the bedrooms and the bathroom on the top floor. You could put the tiny pieces of furniture where you wanted them to be.

- a. What was it?

6. SCORPIONS

Scorpions are small animals with poisonous stings at the end of their long tails. The scorpion can curve its tail up over its head.

Scorpions look like insects but they are not. Like other animals in their family, such as spiders, they have eight legs. Behind their heads there is an extra pair of limbs that look like large claws, used to catch their prey. Their sting is mainly used for defence.

Although a scorpion's sting does not often kill humans, people need to take care. A sting from a scorpion causes a fierce burning pain.

A scorpion's young are not hatched from eggs, they are born alive. Until it is a few days old, a baby scorpion's home is its mother's back.

Scorpions live in countries where the daytime temperature is very high. They usually hunt for food at night. They eat insects and spiders and other small animals.

- a. What animals are related to scorpions?
- b. Does a scorpion only use its sting for defence? How do you know that?
- c. Can people be killed by a scorpion's sting? How do you know that?
- d. How do young scorpions spend the first part of their lives?
- e. Why don't scorpions usually hunt for their food in the daytime?
