

1. Debbie pushed the button and waited for the lights to change.
Where was Debbie?

2. Baby James spat the mashed vegetables straight back at his father.
What was his father doing?

3. The only noise in the room was the rustle of paper whenever Tom turned a page.
What was Tom doing?

4. OLD BUS

The old bus bounced over the rickety bridge. There was a clatter as the engine cover flew off, hit the railing and disappeared.

- a. Why did the engine cover fly off?
- b. Where did the engine cover most likely disappear to?

5. ROY

Roy had waited a long time but nothing was happening. Then suddenly the line jerked. In his excitement he tripped over my bag and fell head first into the water.

- a. What was Roy doing before he fell?
- b. Why did he become excited?

6. MONARCH BUTTERFLIES

Monarch butterflies lay their eggs on the underside of the swan plant. There the eggs can grow, safe from the wind and sun. When they hatch, the tiny caterpillars eat their egg shells. Then they start to eat the leaves of the plant they are on.

They eat all the time and grow quickly. As they grow, they shed their skins many times because the skin does not stretch to fit the new body. When they have finished growing, the caterpillars make cocoons and hang upside down from a leaf or the stem of the plant.

While they are inside their cocoons many changes take place. As these things happen the cocoons change colour from light to dark green.

After about three weeks the butterfly is ready to hatch. At first, the new butterfly is weak and unable to move, but it slowly gains strength and is able to fly away.

- a. Why are butterfly eggs not found on the top side of leaves?
- b. What do the caterpillars eat first?
- c. What would happen if they didn't shed their skins?
- d. What colour is the cocoon to begin with?
- e. When is the butterfly ready to fly away?
