

## Grid references

- On some maps we used a letter and a number to name a square. Here we name points.
- We use a **number line as each axis** to refer to a point.
- (2, 5)** refers to 2 on the horizontal axis and 5 on the vertical axis. **(0, 0)** is called the **origin**. These coordinates are called a **number pair**.

1 What is found at:

a (1, 2)?

b (5, 7)?

c (1, 6)?

d (0, 0)?

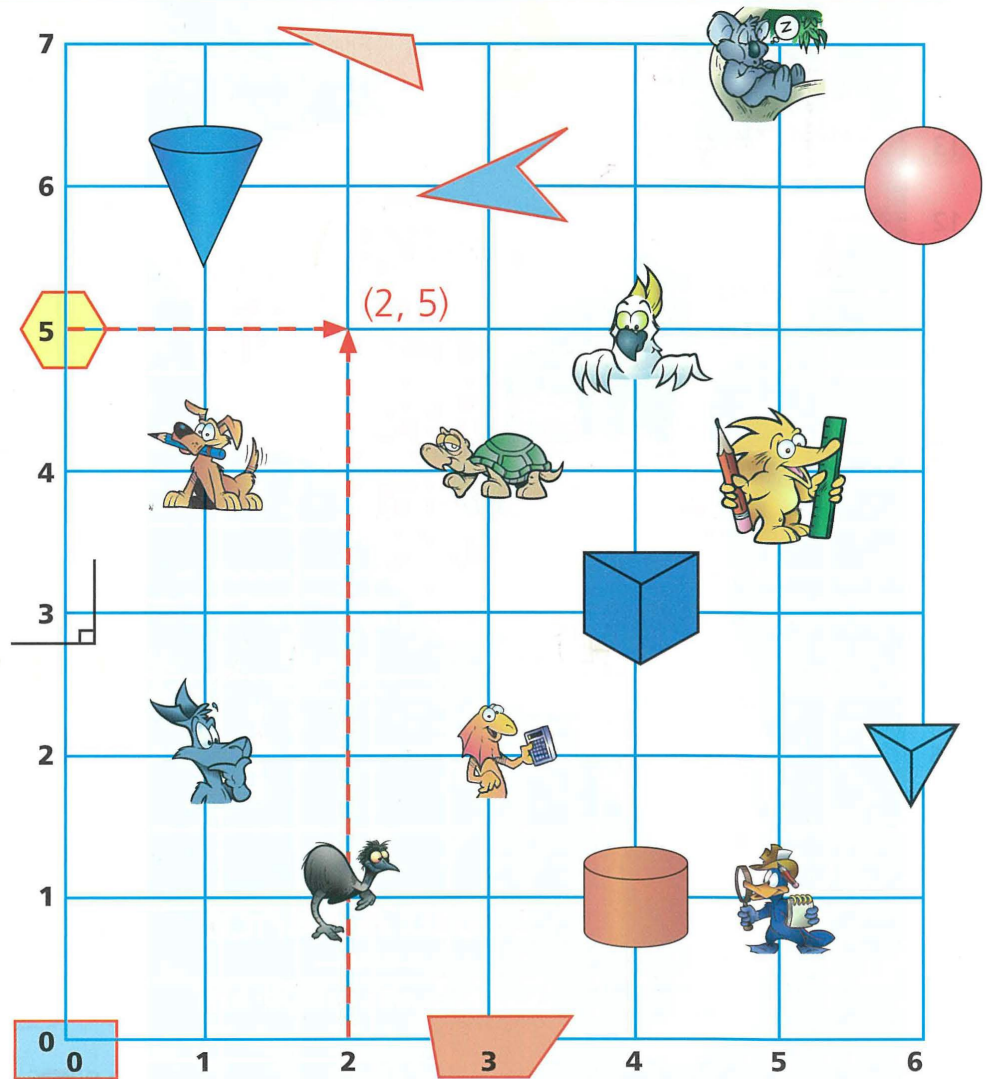

e (2, 7)?

f (4, 1)?

g (5, 4)?

h (6, 6)?

i (5, 1)?

2 Give the coordinates for the:

a emu

b triangular pyramid

c trapezium

d hexagon

e triangular prism

f lizzard

g cockatoo

h right angle

i turtle

3 a Draw a red dot at each of the coordinates:

(0, 1), (6, 1), (4, 2), (6, 4), (6, 7), (4, 6), (3, 7), (0, 7), (4, 4), (2, 2) and (0, 1) again.

Join these points in order to create a closed shape. Name your shape.

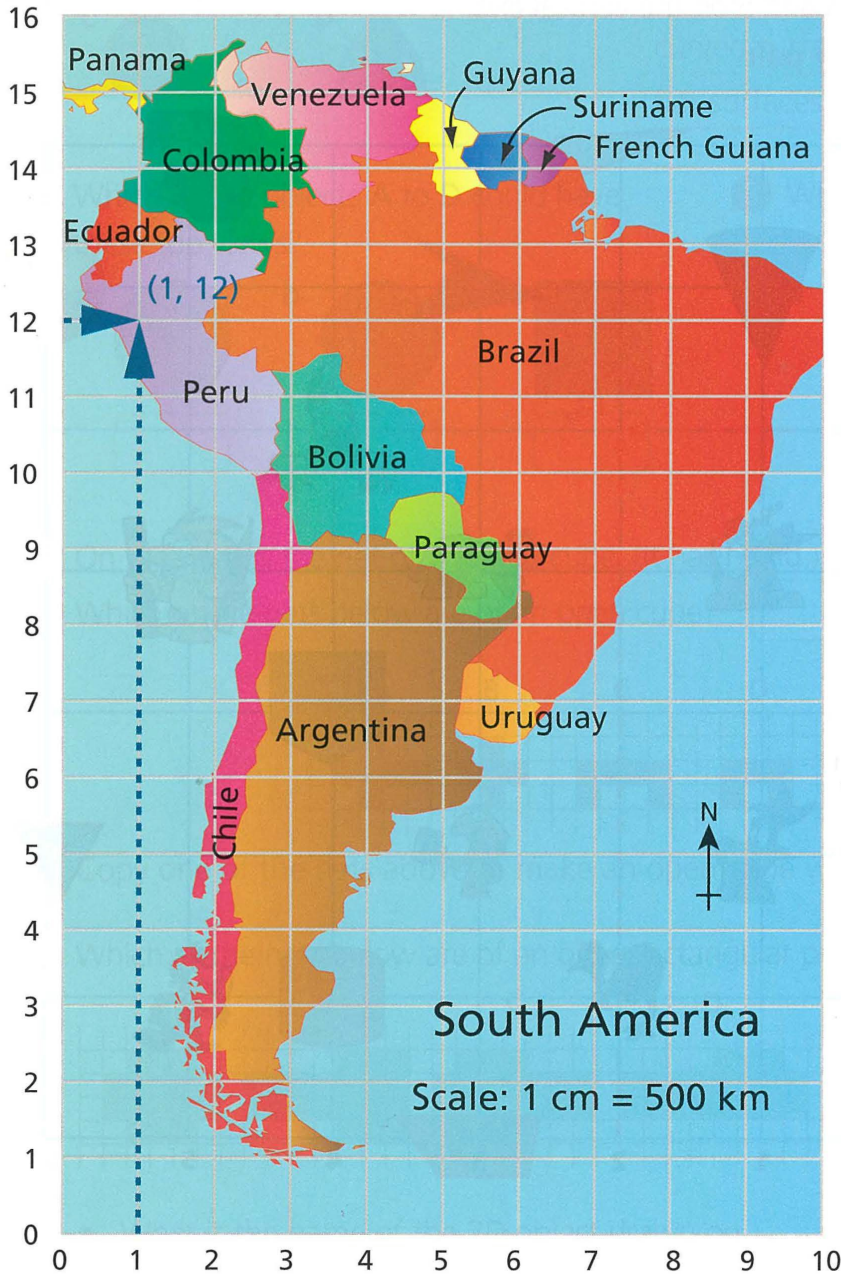

Guyana is at (5, 14).  
The longest country  
in the world is at (2, 3).

- The coordinates used here refer to the intersection of grid lines.
- (1, 12) means go up from 1 on the horizontal axis and across from 12 on the vertical axis.

I'm a llama.  
I come from (1, 12).

- 1 Write down the countries that have these coordinates.

a (2, 14)

b (0, 15)

c (7, 10)

d (4, 7)

e (5, 9)

f (6, 7)

g (2, 11)

h (1, 13)

- 2 Which of the coordinates should we use for Guyana?

- 3 Give the coordinates of:

a Uruguay

b Ecuador

c Suriname

d Paraguay

- 4 Give three sets of coordinates for Colombia.

- 5 Give three sets of coordinates for Bolivia.

- 6 Give the greatest distance (to the nearest 100 km) across each country (west to east).

a Uruguay

b Bolivia

c Brazil

d Colombia

- 7 Which country is approximately:

a 1500 km south of Colombia?

b 800 km west of Suriname?

- 8 Use a grid to draw a map of Tasmania using a simple scale.
